Cattle Producers,

It's been a great year for Georgia HERD! Tifton HERD had a very good year, and it has likewise been a very strong year here in Calhoun. I think you will agree the heifers look great!

The Georgia HERD program is a joint effort between UGA, the Georgia Cattlemen's Association, and the UGA College of Vet Med. Even more importantly, this program would not be possible without the beef cattle producers that consign these heifers. They have a lot invested in developing these herd replacements. The beef industry will not last without great females to grow the Georgia and national herd.

The GA HERD program brings a wealth of knowledge to consignors and buyers alike. One thing is clear. We know what makes a lasting, productive female, and now we have the Igenity Beef Scores to add to the wealth of information for the commercial heifers. Producers are well-equipped to make well informed selection decisions. Along with the reproductive tract scores and pelvic measurements, buyers now have the opportunity to see how these heifers rank for marbling, ribeye, residual feed intake, and functional traits such as Stayability (STAY) and Heifer Pregnancy (HPR). This year we also have the addition of the Scrotal Circumference trait (SC) among the Igenity Beef scores which is an indirect indicator of fertility in females. Although we don't have all the Igenity Scores in the sale catalog, you can find all of them at ugabeef.com along with any additional information including the sale videos.

Please feel free to come look at the heifers at the NW GA Livestock Pavilion in Calhoun any time after 2:00 pm on Tuesday, May 28. If you would like to see the heifers in the weeks prior, please call us so we can have the heifers available for viewing. Please don't hesitate to contact anyone on the HERD team with any questions you may have. We look forward to working with you for sourcing your herd replacements. See you Wednesday, May 29th at 12:30 p.m.

Sincerely,

Jason Duggin, Extension Animal Scientist - Beef Cattle

General Information

The Calhoun Heifer Evaluation and Reproductive Development (HERD) Program is a service to Georgia cattle producers. The University of Georgia's College of Agricultural and Environmental Sciences Animal and Dairy Science Department, College of Veterinary Medicine, and the Northwest Georgia Research and Education Center manage the program with the hands-on assistance of Georgia County Extension Agents in cooperation with the Georgia Cattlemen's Association.

This sale catalog provides the heifer development protocols and test data for the Georgia HERD Program using industry best management practices to improve herd replacements in Georgia.

Directions to Livestock Pavilion

From Exit 312 off I-75: Take Highway 53 West approximately 2 miles. Turn right on McDaniel Station Road. Continue on to stop sign. Turn left on Hwy. 53 Spur, SW. Go approximately 200 yards. Turn left to arrive at the Livestock Pavilion.

GPS Address:

1286 Highway 53 Spur SW
Calhoun, GA 30701

All persons who attend this sale do so at their own risk. The owners and sponsors assume no liability, legal or otherwise, for accidents of any nature.

Announcements

Announcements made from the auctioneer and sale management on sale day will take precedence over the material in this catalog and all other announcements.

Sale Supplement

A supplement will be available sale day and online ahead of the sale with the complete profile of Igenity Beef genomic traits on all commercial heifers.

Sale Order

Sale will begin at 12:30 p.m. The emphasis of the HERD Program is reproductive efficiency and determines the sale order. There will be two divisions: AI-bred Heifers and Natural-bred Heifers

(in that order). Within each division, sale order is determined by date of conception, grade (as determined by a grading committee), and by the birth date of the heifer. **Heifers will be sold by video and will not be brought through the ring on sale day. Please register at liveauctions.tv to bid online.**

Terms and Conditions

1. Each heifer sells to the highest bidder.
2. The auctioneer settles any dispute as to bids.
3. The terms of the sale are cash or check.
4. Each heifer becomes the risk and property of the new owner as soon as sold in the auction. However, the staff takes every safety precaution until all cattle are loaded.
5. Staff will tend to heifers for a period of 48 hours after the sale.
6. If a registration number is listed for a heifer in the catalog, the **consignor** will furnish a properly transferred certificate of registry for that heifer. No registration certificates will be transferred for heifers selling as commercial.
7. The **consignor** pays the cost of transfer fees for registered heifers.
8. The **buyer** pays for the cost of AI Certificates.
9. Health certificates will be available for each heifer sold. Buyers from states with special requirements should call 706-728-4354.
10. A qualified veterinarian has palpated each heifer as pregnant. Every heifer comes with a guarantee to be pregnant the day of the sale. Purchasers will have 30 days from the date of sale to observe for signs of non-pregnancy and report any open females to the sale management. If a qualified veterinarian determines a sold pregnant heifer is in fact open, then the purchaser will be eligible for a 25% refund of the purchase price from the consignor of the open heifer. The consignor and/or sale management reserve the right to retest any heifer in question for pregnancy.
11. The information on the sires in the catalog is correct to the best of our knowledge and ability. However, in some cases, the AI and PE dates are so close, it may require DNA testing to determine the correct sire of the resulting calf. In this situation, the DNA testing will be at the **buyer's** expense.

Explanation of Data

Heifer Development Protocols

- Pre-delivery: IBR/BVD/PI3/BRSV, 7-Way Blackleg, 5-Way Lepto, and Pasteurella.
- Receiving: Dewormed, given an intranasal vaccine, tested for PI-BVD (all heifers tested negative).
- On 1/3/24 they were given a booster for IBR/BVD/PI3/BRSV, 7-way Blackleg, and 5-way Lepto-Vibrio.
- Nutrition: High-quality hay plus a supplement of feed consisting of soybean hulls and corn gluten pellets with a molasses coating as well as a mineral/vitamin mix.
- Each heifer has been evaluated for pelvic area, frame score, disposition, reproductive tract maturity score, and structure.
- The heifers were AI'd once, followed by 45 days of exposure to calving ease Angus bulls. Heifers not meeting the minimum RTMS, pelvic area, docility, found to be pregnant upon delivery, or not confirmed pregnant after AI and exposure are not sale eligible.

HERD Test Data

- 1. Delivery Wt:** Weight on 11/30/23.
 - 2. Target Wt:** Estimated mature weight x 65%. Heifers should reach this weight by 15 months of age for optimum reproduction.
 - 3. Final Wt:** Weight on 3/26/24.
 - 4. WDA:** Weight per Day of Age on 3/26/24.
 - 5. ADG:** Average Daily Gain on 3/26/24.
 - 6. Frame Score:** Calculated using BIF's Guidelines.
 - 7. Disp:** Average of 3 scores taken throughout the program on a scale of 1 - 5. 1 being docile and 5 being very aggressive.
 - 8. Actual Birth Weight**
 - 9. Actual Pelvic Area**
 - 10. RTMS:** Reproductive Tract Maturity Score is not a measure of fertility or productivity. It's an estimate of the repro tract on a scale of 1-5. The higher number indicates a more mature tract. Heifers with a more mature tracts should conceive earlier in the breeding season.
- Safe in Calf:** All heifers are guaranteed to be pregnant the day of the sale. If a heifer is safe to an AI date, that date along with the service sire is listed. If a heifer is safe to one of the clean-up bulls, then the pasture exposure (PE) dates are listed along with the names of the service sires.

GE EPD Data for Registered Heifers

Registered Heifer's Genomic Enhanced EPDs

Registered heifers have their own GE EPDs listed in their lot profile. For additional EPDs and information, search the registration number on their breed association website. **EPDs are current as of 4/24/24.**

Safe in Calf

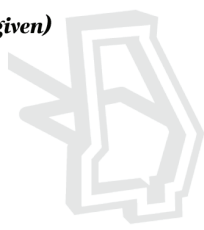

- 12. Birth Weight ***
 - 13. Weaning Weight ***
 - 14. Yearling Weight ***
- *12, 13, & 14** Are expressed in pounds of calf both below and above the average for their breed.
- 15. Calving Ease Maternal:** Difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters.
 - 16. Milk:** An indication of the added weight at weaning due to milk.
 - 17. Marbling:** Prediction of differences in future progeny performance relative to carcass marbling score.
 - 18. REA:** Predicts the difference in ribeye area of a sire's progeny compared to progeny of other sires. Reported in square inches.
- 19, 20, 21, & 22:** \$Values listed for registered heifers.

- 11. Calving Ease Direct:** Difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers.

Igenity Data for Commercial Heifers

Commercial Heifer's Igenity Beef Index

The Igenity Beef test is an enhanced genetic tool to help evaluate genetic potential for maternal, performance, and carcass traits in commercial replacement heifers. These decision indexes are based on a ranking of a 1 - 10 score.

Safe in Calf

indicate a higher probability of progeny with acceptable disposition.

- 14. Average Daily Gain:** Based on pounds of gain per day. The Igenity score for ADG identifies an animal's genetic potential for post-weaning growth.
- 15. Weaning Weight:** Pounds at 205 days.
- 16. Yearling Weight:** Pounds at 365 days.
- 17. Marbling:** Marbling score indicates the degree of marbling in the rib eye at the twelfth rib expressed in USDA marbling units.
- 18. REA:** Estimates muscling in a beef carcass and is measured in square inches of the ribeye muscle at the twelfth rib.
- 19. *Igenity Maternal Index (IMI):** Emphasis is placed on fertility, reproduction, and weaning weight.
- 20. *Igenity Terminal Index (ITI):** Emphasis is placed on hot carcass weight, marbling, and rib eye area.
- 21. *Igenity Production Index (IPI):** Emphasis is placed on stayability, marbling, and hot carcass weight.

Igenity Beef Traits

Maternal Traits

Birth Weight (BW) – Variation in birth weight a heifer or bull will pass along to its offspring. A higher score indicates greater genetic potential for heavier birth weight.

Calving Ease Direct (CED) – Percentage of unassisted births, indicating greater probability a calf will be born unassisted out of a first-calf heifer. Genetic factors such as birth weight and shape of the calf are included in CED. A higher value is greater calving ease.

Calving Ease Maternal (CEM) – The probability a first-calf heifer will calve unassisted. CEM includes all genetic factors that impact a heifer's ability to calve unassisted, such as pelvic area and her genetic contribution to birth weight. A higher value is greater calving ease.

Stayability (STAY) – The chance a heifer will remain in the herd as a productive cow until at least six years of age. A higher value is desired.

Heifer Pregnancy Rate (HPR) – A heifer's potential to conceive during breeding season, relative to other heifers. A higher value is desired.

Docility (DOC) – The animal's genetic potential to be calm or have calm offspring. Higher scores indicate a higher probability of progeny with acceptable disposition.

Milk (M) – Expressed as pounds of calf weaning weight affected by the milk production of a calf's dam. This is not a prediction of actual pounds of milk produced.

Scrotal Circumference (SC) - Difference in scrotal size as an indication of fertility in replacement females. A higher score equates to higher scrotal size.

Performance Traits

Residual Feed Intake (RFI) – This is an indicator of feed efficiency. It is the difference in animals' daily consumption of feed to achieve the same level of daily gain. **Lower RFI indicates greater feed efficiency.**

Average Daily Gain (ADG) – Based on pounds of gain per day. The Igenity score for Average Daily Gain (ADG) identifies an animal's genetic potential for post-weaning growth.

Weaning Weight (WW) – lbs.at age of 205 days.

Yearling Weight (YW) – lbs. at age of 365 days.

Carcass Traits

Tenderness (TEND) – Animals' genetic potential for carcass tenderness as measured by the Warner-Bratzler Shear Force test. A higher score indicates greater tenderness.

USDA Marbling (MARB) – Marbling score indicates the degree of marbling in the rib eye at the 12th rib expressed in USDA marbling units.

Ribeye Area (REA) – Estimates muscling in a beef carcass and is measured in square inches of the ribeye muscle at the twelfth rib.

Fat Thickness (FAT) – Scored as depth of fat in inches over the ribeye muscle at the twelfth rib. Higher fat thickness scores equate to lower lean yield.

Hot Carcass Weight (HCW) - Hot carcass weight is the hot or unchilled weight of the carcass after slaughter and the removal of the head, hide, intestinal tract and internal organs.
